Freshworks – Website Core team – Development

Build one platform (Apostrophe CMS tool) on top of that 6 product websites developed. The main purpose to build CMS tool is to avoid marketing team depending on dev teams for small changes like text, images, colors, alignments of content. Marketing team can drag and drop components design the page themselves.

Roles and Responsibilities:

1. Creates reusable UI components with BEM technique and web standards.
2. Created our own libraries without using third party libraries like image slider, pricing slider, accordions etc. Freshworks website manager don't accept to use third party libraries.
3. Build mobile first response layouts with minimal media queries.
4. Maintained Quality, Scalable and web industry standards code and applied in entire application.
5. Skills applied Node & NPM, Ruby as HTML, SCSS and JavaScript, webpack.
6. Familiar with GitHub, project is maintained GitHub, we used Tower for repo check in and check out.
7. Optimize the code and assets for better page's performance.
8. Team lead for one of the product FreshService website team. Handled 2 teammates and report daily status to Website core team Manager.
9. Always support marketing teams to fulfil their requirements.
